

CLEANING & SEALING RECOMMENDATIONS

WE STRONGLY RECOMMEND that cleaning or sealing solutions and methods are pre-tested well in advance. This includes the testing of masonry cleaners, detergents, or 'breathable-type' of sealers used on our smooth and split face MaxBric™ or MaxBloc™ products. Testing can be performed on a separate sample mock-up or if owner designates, on a smaller, less-conspicuous area of the masonry wall. This will aid for better project approval for workmanship and final results.

RESULTS DO VARY from project to project due to workmanship, masonry material, concentration-levels of cleaners, composition of the wall, and time of use. Refer to your cleaning or sealant manufacturer's instructions and recommendations for use.
